

# ROLL-FACA

## CUTTING MACHINE

This equipment cuts plastic molded parts using die rules. PVC up to 0.003'' thick can be easily cut. It works with plastics, foams and paper board. Roll Faca can be used to cut skin, blister or clamshell packaging and to make hanging holes.

### Samples:

### GENERAL FEATURES

- Steel cylinders are designed to resist bending caused by cutting force.
- Works on both sides increasing its production.
- Motor and reducer were calculated to ensure long-life service.
- Screw devices regulate the gap between cylinders.
- Uses low-cost die rules.

### TECHNICAL FEATURES

Output.....30 to 90 cycles per hour.  
Plastic grade.....PVC, PS, PET.  
Maximum cutting area.....23 1/2" x 31 1/2".  
Maximum width.....23 1/2" or 31 1/2".  
Table dimensions.....23 1/2" x 27 1/2".

Plastic thickness.....up to 0.003 "(PVC).  
Maximum cutting depth.....2 7/8".  
Dimensions.....59"x 31 1/2"x 51".  
Weight.....200 Kg.  
Operation.....both sides.  
Motor power.....1 1/2 HP.
